Re: Electrical Upgrade Main Kitchen

Dear Mike,

All of the staff involved with the electrical project your company completed for us would like to express our gratitude for the outstanding job Johnson Mechanical provided Sonoma Developmental Center. This project was in the Main Kitchen, which is one of the most critical buildings on our facility. There were many concerns prior to this project in regards to the interruption of electrical service in the building where all of the food is prepared for our Clients. The physical aspects of this project were difficult as well as the coordination with kitchen staff and the work that had to be done in the building to keep meals on schedule. Like I said, during the planning stages for this project SDC staff expected problems and had plans in place to deal with them.

Not one time during this project did we receive a complaint. We had absolutely no interruptions in service that were not expected, nor did we have to use any of the plans we had in place if something were to happen unexpectedly. The project went off without a hitch. Sonoma Developmental Center deals with many contractors throughout the years, and there is none that have ever done a better job than Johnson Mechanical has done on this project. We sincerely hope that your company will bid future work for Sonoma Developmental Center. We would be very happy to have your company back on future projects.

Sincerely,

A handwritten signature in black ink that reads "Mario Pasquini".

Mario Pasquini
